

Patient State Index During A Cardiac Arrest In The Operating Room.

Nguyen N.K., Lenkovsky F., Joshi G.P. *Anesth Analg.* 2005 Jan;100(1):155-7.

Abstract

A 53-yr-old man undergoing laparoscopic cholecystectomy experienced cardiac arrest intraoperatively. Patient state index values decreased to single digits during the cardiac arrest and returned to baseline after successful cardiopulmonary resuscitation.
